

# V10

## DISTRIBUTION AMPLIFIER

### INSTALLATION INSTRUCTIONS

The V10 is a wide band unity gain 10 output video distribution amplifier. It is powered by an +18 VDC power cube.

To install the unit, simply connect your video source to the VIDEO INPUT connector at the side of the unit. The input video is internally terminated with a precision 75 Ohm termination. Then connect your Video Loads to any of the 10 outputs. Unused outputs do not have to be terminated for proper operation. There are no adjustments necessary for installation.
